### About Cloudiway

Cloudiway develops sustainable, modern technologies to solve the world's most significant business challenges. Our success is based on our deep experience and strong know-how in data migration and enterprise coexistence between Google Workspace and Microsoft 365. In our success, we recognize employees and team achievements and create exceptional opportunities for career growth.

SaaS software editor since 2010, Cloudiway is an international company, offering data migration and enterprise coexistence solutions to large groups as well as to SMEs and associations.

A pioneer in supporting unique data migration scenarios, we design technically innovative products for our customers that are easy-to-use.

### We are hiring a full-time Test Automation Engineer

Based in Annecy, France, you will integrate with the technical team (composed of 5 people). You will be responsible for the development and monitoring of cloud-to-cloud and on-prem-to-cloud data migration products.

Primary responsibilities are:

- Create an automated unit test environment to integrate into our existing CI/CD process.
- Integrate new automated testing tools to help streamline our testing methods.
- Work with our QA Team writing and executing both automated and manual test scripts for front-end components.

Benefits: Luncheon vouchers (France); Family Mutual Insurance + Provident Fund (France). Health Insurance (remote).

### Minimum Requirements

- A bachelor's degree in computer science or equivalent.
- Minimum 3 years of experience in a similar or developer role.
- Working knowledge of automation testing tools like Selenium and Cucumber.

- Good knowledge of C#, PowerShell, and SQL and the ability to integrate SQL results into your tests.
- Basic knowledge of CI/CD pipelines and how to integrate automated testing into them.
- Basic knowledge of Cloud technologies: Azure, AWS, and O365.
- Experience using Docker Containers is a plus.

#### Work related skills

- A high level of autonomy (remote fulltime possible).
- Ability to learn new technologies quickly.
- Deep technical comprehension: The candidate must demonstrate an ability to quickly grasp a complex technical environment.
- Ability to propose new automated testing methods and be able to develop a testing process from conception to implementation.
- Ability to meet high pressure deadlines.
- Fluent in English written and spoken (French will be a plus)
